

PROPERTY ERP

by PeridotX

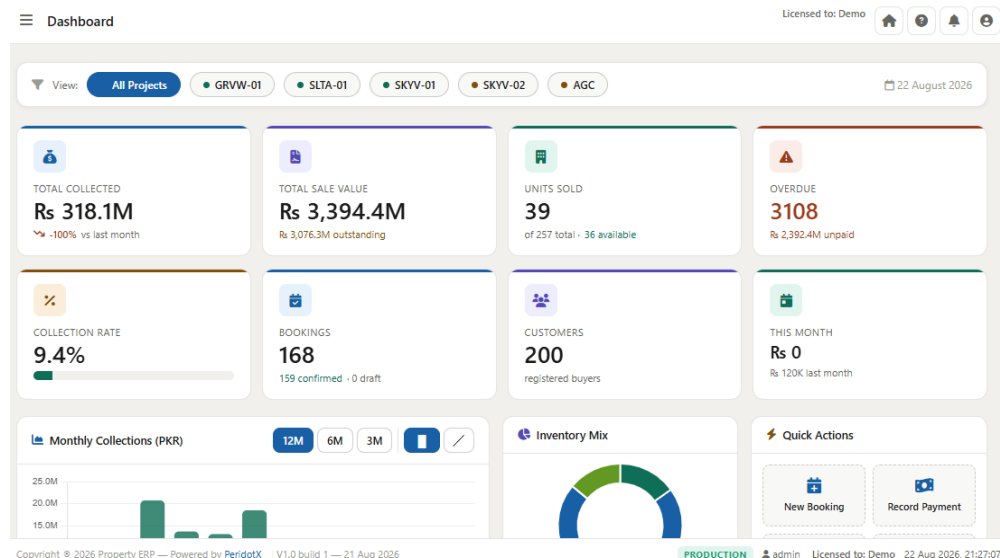

The complete real-estate ERP for developers who sell apartments, plots, houses and shops — one platform for sales, construction, accounting and after-sales service.

Built for developers, from booking to handover

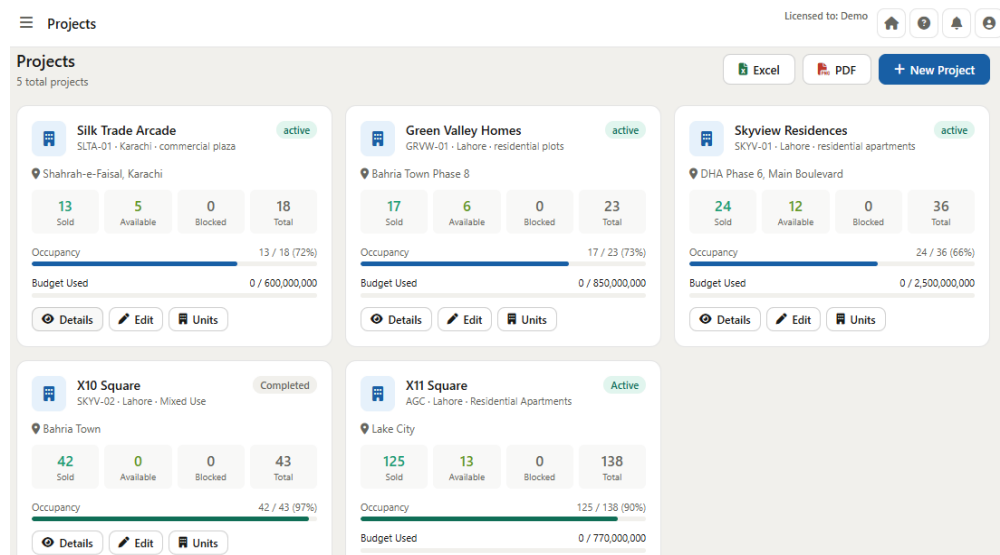

Property ERP replaces spreadsheets and disconnected tools with one system that covers every stage of a real-estate project — selling apartments, plots, houses and commercial shops; tracking construction from grey structure to handover; managing sales agents and commission; and keeping a fully auditable set of books, project-wise and company-wide.

Sell Any Property Type Apartments, plots, houses and shops in the same project — one booking and installment workflow for every unit category.	Sales Agents & Commission Track agents and brokered sellers, auto-calculate commission at booking, and post payouts straight to the ledger.
Construction Tracking Follow every unit from foundation through grey structure, finishing and handover, with milestone dates recorded.	Project Tasks & Billing Log repairs, snags and service requests per project, bill customers directly and post the income automatically.
Full General Ledger Every booking, receipt, expense and payout posts through one balanced GL engine — no manual journal entries needed.	Reports That Matter Trial Balance, Profit & Loss and Balance Sheet — company-wide or filtered to a single project, on demand.
Approval Workflows Turn on approval gating for bookings, payments and expenses so nothing posts to the books unreviewed.	Role-Based Security Granular permissions by module and action, audit logging, and admin or self-service password reset.

See it in action

A live dashboard — collections, sales, bookings and overdue installments, project-wise and company-wide.

Every project at a glance — unit mix, occupancy and budget utilization.

Why developers choose Property ERP

- One system for sales, construction and accounting — no more reconciling three spreadsheets.
- Built specifically for developers selling a mix of apartments, plots, houses and shops.
- Every transaction is auditable — booking to receipt to ledger, in one traceable chain.
- Runs on your own SQL Server database — your data stays yours.
